

Life Safety is the most basic of all “safety” programs.

The ability to evacuate when necessary is the most important life safety element.

What to check
Emergency exit signs are installed where needed.
Emergency exit signs are in good condition and are lit.
Access to, through, and away from emergency exits is at least 28” wide and is unobstructed.
Interior doors that may be mistaken for exits are labeled “Not An Exit”.
Emergency exit doors are unlocked from the inside and swing outward (not inward).
There is no storage in stairwells, on stairs, or in the path of emergency exits.

To avoid confusion,
place signs on non-
exit doors (where
there could be
confusion)
