

Chemicals and YOU

You may use a number of chemicals every day - but do you know how to protect yourself from exposure and what to do if you are accidentally exposed to chemicals?

Never bring chemicals from home. Use only those cleaning products provided at work.

Only use chemicals in original bottles or containers with proper labels, like the ones at right. If chemicals are not stored in their original containers, ask your supervisor for assistance.

Know how to access Safety Data Sheets for the chemicals you use. These tell you how to protect yourself from accidental exposure (wear gloves, for example), and what to do if you are accidentally exposed.

Follow the rules regarding personal protective equipment. For example, wear vinyl gloves when using all bathroom cleaners.

Never eat or drink around chemicals. Remove gloves and wash hands after cleaning and before drinking, eating, or smoking.
